

MOBILE STATION

MODULAR
WORKS WITH ALL MACHINES

With the WMF mobile coffee station you are independent.

All you need is a 230V socket for electrical connection and you can prepare your coffee anywhere you like. You can place your coffee machine to suit your requirements independent of a fixed water supply or drain, while the system is fully programmable for easy self service, therefore lowering costs as it does not need an attendant.

There are two different sized units, both with space for one coffee machine with additional units such as cooler plus cup rack or a vending unit.
